Pred. No. is the number of results predicted by chance to have a

score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

Submitted (11-MaR-2002) Ceres, Inc, 3007 Malibu Caryon Road, Malibu, CA 90265, USA

This clone sequence is one of 5,000 Ceres full-length cDNAs made available to TIGR and Genbank. The following quality assessment of this set was done by comparison with Known proteins: two percent of the clones are estimated to be 5'-truncated; less than one percent are 3'-truncated; approximately two percent represent alternative splice variants, including unspliced introns and spliced exons; one percent may contain premature stop codons; five percent may have frame shifts in a coding region. A sequence is considered to be 5'-truncated if it lacks the translation initiation start (ATG). A sequence is considered to be 3'-truncated if it lacks the certain all end of the encoded protein. Please note that these cDNA sequences are derived from the Ws or Laker cotypes and therefore may contain polymorphisms when compaced to sequences from COl-0. Genset carried out the library production and sequencing of the full-length clones. Geres, Inc. carried out the clustering of the full-length clones. Geres, Inc. carried out the clustering of the full-length clones. Geres, Inc. carried out the clustering of the corganism="Arabidopsis thaliana" (AD znef="taxon:3702" clones; and sequence assembly.

/clone lib="eticlated leaf tissue of rice"
/note="Westor: Lambda ZAP II/PBluescript, V-type: Plasmid;
A Lambda ZAP II/DNA library was constructed from mRNA
extracted from eticlated leaf tissue of the rice cultivar
'IR36' and converted to pBluescript (amp resistant) as
described in Causes et al. (1994) Genetics 138:1251-1274.
For insert amplification, Use MI3 forward and reverse
primers. Restriction site is ECORI. Clones from this
library are designated with the prefix 'RZ'."

The invention relates to an Arabidopsis thaliana nucleic acid (I)

Comprising a sequence Gapable of hybridising under stringent conditions
to a sequence selected from any one of 999 sequences (ABN99231-ABN99231),
given in the specification or lits fragment. A polypeptide (II) encoded by
given in the specification or lits fragment. A polypeptide (II) encoded by
Given in the specification or lits fragment. A polypeptide (II) encoded by
Given in the specification or lits fragment. A polypeptide (II) is
useful for screening a candidate agent for its biological effect. (I) is
useful in identifying monologues or related genes, in producing
compositions that modulate the expression or function of its encoded
compositions that modulate the expression or function of its encoded
compositions that modulate the expression or function of its encoded
compositions that modulate the expression or function of its encoded
compositions that modulate the expression or function of its encoded
compositions that modulate the expression or function of its encoded
compositions that modulate the expression or function of its encoded
compositions that modulate the expression and its studying
a care best capable of witheranding a particular disease or environmental
compositions that capacity is agents are useful in improved methods of treating
crops to prevent or treat disease. (II) are also useful in screening
crops to prevent or treat disease. (II) are also useful in a companient to the action of interest, for establishing the extent to which
crops to prevent or treat disease. (II) are also useful in a proteins of interest, for establishing the extent to which
any specific insect and/or pathogen is responsible for damage to a
crop structular plant, for identifying other mediators that may induce
configurable plant, for identifying other mediators that may induce
configurable plant, for identifying other mediators that may affect the biological function of the gene or gene products
configurable. (IV) is useful in the study of genetic den ecification, but was obtained in electronic format esegdata.uspto.gov/sequence.html?DocID=999909770445

The present invention relates to coding sequences (see AAP44740-F44840 and AAF44843-F44844) and proteins (see AAB65714-B65814) involved in programmed cell death (PCD; apoptosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by eathy incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Novel defender against cell death polynuclectide useful for modulating programmed cell death pathway and specific development pathways in forestry plant
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       203 GGTGTACCTTACGCTATGCTGTGCTTTAGTGGCATCGGCTGCTGGGGCTTACCTTCACAT 262

                                                                               The present invention relates to coding sequences (see AAF44740-F44840 and AAF44443-F44844) and proteins (see AAB65714-B65814) involved in programmed cell death (PCD; apoptosis). The coding sequences and proteins of the present invention are useful for modulating a PCD or cell death pathway and various developmental pathways in a forestry plant, by stably incorporating one of the present coding sequences into the genome of the forestry plant, where the coding sequence provides a PCD pathway that is not present in a native form of the forestry plant.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                309
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           489
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             249

                                                                                                                                                                                                                                                                                                                                                                                                        The present invention relates to proteins derived from bovine mammary gland cells. The invention is useful for stimulating bovine mammary gland cell growth and function, inhibiting the growth of vaculus mammary gland cancer cells, inhibiting the angiogenee's and vascularization of tumours, or modulating the growth of blood vessels in a mammal.

Lung cancer associated proteins and polynucleotide sequences, their agonists, and antagonists may have neuroprotective; cytostatic; cardioactive; limmunomodilatory; muscular active general; vulnerary; gastrointestinal general; nephrotropic; antiinfective; gynecological; or antibacterial activity. The invention also includes antibodies specific for the protein or polynucleotide sequences. The hum and ander associated polynucleotide sequences. The protein may be used for detection of lung cancer, chromosome identification, as chromosome markers, and for numerous etheromographic research purposes. The proteins may be used to treat, adjagnostic or research purposes. The proteins may be used to treat, disorders such as neural; immune, muscular, reproductive, gastrointestinal, pulmonary, cardiovascular, renal, and proliferative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              cancer associated gene sequences, referred to as lung cancer

expression Detecting granulocyte activation by detecting differential expression genes associated with granulocyte activation, which serves as diagnostic markers that is useful for monitoring disease states and drug toxicity

Claim 1; SEQ ID No 1229; 114pp; English.

The invention relates to detecting (MI) granulocyte (GC) activation (GCA), by detecting the level of expression of gene(s) (GS) identified by the chief analysis as given in the specification, and comparing the expression level in an unactivated of GCA, where differential expression level in an unactivated GC, where differential expression of GS is indicative of GCA and that alters the expression of GS is indicative of GCA with an agent capable of modulating (M2) GA by contacting GC with an agent capable of modulating (M2) GA by contacting GC with an agent capable of modulating (M3) is a mallergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease using the chronic) in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by detecting the level of expression in a sample of the tissue of gene (s) from GS, where the level of expression of the gene is indicative of inflammator).

(4) It reating (MS) an inflammation (especially chronic) or in a tissue, an allergic response in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting a tissue having inflammatory disease, by contacting a tissue having of the detecting an inflammation with a magnet that modulates the expression or sterile for ground in a subject, exposure of a subject to a pathogen or sterile inflammatory disease, by contacting an inflammation in a tissue, an allergic cresponse in a subject, exposure of a subject to a pathogen or sterile conflammatory disease (e.g. psoriate inflammatory disease (e.g. psoriate) in a tissue, an allergic cresponse in a subject, exposure of a subject to a pathogen or sterile response in a subject, exposure of a subject to a pathogen or sterile conflammatory disease (e.g. psoriate inflammatory disease (e.g. psoriate inflammatory bowel disease, crohn's disease, ulcerative colitis, persistic infection, protozoal infection, viral infection, protozoal infection, viral infection injury, when sec of the printed specification, but was obtained in electronic format directly from WIPO at form part ftp.wipo.int/pub/published_pct_sequences The sequence data for this patent

                                                                                                                                                                                                                                                                                                                                                                       This cDNA clone codes for an inhibitor protein, termed BI-1 (see AAW33186), of the pro-apoptotic protein Bax. Nucleic acids encoding BI-1 and BI-2 (see AAW59068) were identified by suppression of Bax-induced death of yeast cells transformed to express human Bax. A human H902 cDNA library was used for library screening. The invention provides vectors, optionally expression or viral vectors, ontaining BI modelic acids, and host cells containing these vectors. The nucleic acids, and host cells containing these nortains of these proteins in cells, or antisense molecules prepared from them used to decrease expression. In these ways, cellular apoptotic activity may be modulated (claimed). The nucleic acids and complementary sequences are also useful as probes to detect BI-encoding nucleic acid molecules in samples.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Query Match

The invention relates to 2175 novel human ovarian antigens (ABP41054-ABP43228) and to CDNAs encoding them (ABP54131-ABD56305), and also encompasses polypeptides 90% identical and polymuchorides 90% identical and polymuchorides dentical to the sequences of the invention. The invention additionally relates to to the sequences of the invention. The invention additionally relates to recombinant vectors and host cells comprising human ovarian antigen polymucleotides and polypeptides in diagnosing, of ovarian antigen polymucleotides and polypeptides in diagnosing, treating, prognosing or preventing various ovary and/or breast cancer, and disorders (e.g., infertility, disorders of pregnancy, anovulation, or polycystic ovariant orders of pregnancy, anovulation, polycystic ovariants of include ovarian cancer and breast cancer, and disorders, infertility, disorders of pregnancy, anovulation, ordinored, inflammatory conditions (e.g., mastitis, oophoritis and vaginitis), immune disorders (e.g., congenital and acquired immunodeficancies, autocimmune oophoritis, systemic lupus erythematosus), blood-related disorders (e.g., anaemia), cardiovascular disorders)
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     Human, ovarian antigen; ovary; ovarian; breast; cancer; tumour; ovarian cancer; breast cancer; tumour; reproductive system disorder; infertility; pregnancy disorder; anovulation; polycystic ovary syndrome; pCOS; ovarian cyst; dysmenorthoes; endocrine disorder; infection; inflammatory condition; immune disorder; blood disorder; cardiovascular disorder; respiratory disorder; neurological disorder; gastrointestinal disorder; urinary system disorder; drug screening; antibody preparation; cytostatic; immunomodulatory; neuroprotective; antibody preparation; cytostatic; immunomodulatory; neuroprotective; antiinflammatory; gynaecological; reproductive; gene; ss.

respiratory disorders, neurological disorders, gastrointestinal disorders and urinary system disorders. Ovarian antigen polypeptides and bolynucleotides may also be used in screening for compounds which modulate ovarian antigen expression or activity. The polynucleotides may further be used for gene therapy, chromosome mapping, in the identification of individuals and in forensic analysis, and the polypeptides may be used as food additives or to prepare antibodies useful in disease diagnosis, durg targeting and phenotyping. The present sequence represents cDNA encoding a human ovarian antigen of the
                                                                                                                                                                                                                  Note: The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPO at ftp.wipo.int/pub/published_pct_sequences.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    513 Addecraagedringengerinngenrecense---seaangerinerindeardearings 569

The present sequence is one of a large number of 5' ESTs derived from mRNAs encoding secreted proteins. No ORF has yet been conclusively identified within the present sequence. The 5' ESTs were prepared from total human RNAs or polyA+ RNAs derived from 30 different tissues. EST sequences usually correspond mainly to the 3' untranslated region (UTR) of the mRNA because they are often obtained from oligo-dT primed cDNA libraries. Such ESTs are not well suited for isolating cDNA sequences derived from the 5' ends of mRNAs and even in those cases where longer cDNA sequences have been obtained, the full 5' UTR is rarely included. S' EST are derived from mRNAs and genomic DNAs. 5' ESTs are also used in diagnostic, forensic, gene therapy and chromosome mapping procedures.
                                                    Human; 5' EST; expressed sequence tag; secreted protein; cDNA isolation; gene therapy; chromosome mapping; ss.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    782

27-APR-1999 AAV86028;

EST clone B115.

human;

Expressed sequence tag; secreted protein; haematopoiesis regulator; tissue growth; activin; inhibin; tumour invasion suppressor; EST; hu chemotaxis; chemokinesis; haemostasis; gene therapy; thrombolysis; receptor; ligand; anti-inflammatory; tumour inhibitor; ds.

```
expressed in cancer tissues. ABB/9933 to ABB/9004 represent proteins encoded by the ABG/076 to ABG/0787 nucleic acid sequences. (I) can be used in antisense therapy, An antibody immunoreactive with a polypebtide used in antisense therapy. An antibody immunoreactive with a polypebtide or detecting the presence or absence of a polymucleotide encoded by a nucleic acid which hybridises to (I) in a cell. A probefyziner derived trom (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the presence of a nucleic acid which phypridises to (I), and for determining the presence of cells from a patient. (I) is useful for determining the presence of colon cancer in a cell or tissue type, for determining the presence of state of other type of cancer, in antisense therapy, to generate macroarrays on a solid surface, to identify a chromosome on which the corresponding gene resides, and in tissue profiling, forensics, genetic analysis, mapping and diagnostic applications. (I) can be used to raise the action of the corresponding and diagnostic applications. (I) can antibodists.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated nucleic acid that is differentially expressed in cancer tissues useful for determining the presence of colon cancer in a cell or tissue type, and in antisense therapy .

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  This sequence represents an expressed sequence tag (EST), and is a polynucleotide of the invention. The polynucleotides of the invention are all secreted EST sequences isolated from a variety of human tissue sources. The EST sequences and proteins encoded by them are predicted to have useful biological activities which would make them suitable for treating, preventing or ameliorating medical conditions in humans and animals, although no supporting data is given. Suggested activities include nutritional activity, immune stimulating or suppressing activity, haematopoiesis regulating activity, tissue growth activity, haemostatic and thrombolytic activity, receptor/ligand activity, anti-inflammatory activity, cabherin/tumour invasion suppressor activity, tumour inhibition activity. The EST sequences are also stated to be useful for gene
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              -- CATICTATGGAATATCGGTGGCCTCCACAACAATGGCTTGCATGGAAGCATGGTG 317

ABQ56306 to ABQ60787 represent isolated nucleic acids (I) differentially expressed in cancer tissues. ABB78993 to ABB7904 represent proteins encoded by the ABQ60776 to ABQ60787 nucleic acid sequences. (I) can be used in antisense therapy. An antibody immunoreactive with a polypeptide encoded by (I) is useful for detecting cancer in a patient sample, and for detecting the presence or absence of a polymodeotide encoded by a nucleic acid which hybridises to (I) in a cell. A probe/primar derived from (I) can be used for determining the presence of a nucleic acid which hybridises to (I), and for determining the phenotype of cells in a sample of cells from a patient. (I) is useful for determining the presence of colon cancer in a call or tissue type, for determining the presence of state of other type of cancer, in antisense therapy, to generate
                                                                                                                         ٦;
